                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bessieres, P., Bolotin, A.,                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Borchert, S., Combinations of soluble T4 protein and anti-retroviral agent having synergistic activity in treatment and prevention of AIDS, ARC and HIV infection.

ARC and HIV infection.

Disclosure; fig 2; 100pp; English.

Soluble T4 constructs may be produced by truncating this sequence, remove the transmembrane and intracytoplasmic domains whilst retain the extracellular region responsible for HIV binding. The sol. T4 combined with an anti-viral agent such as AZT.

Disclosure; ; 207pp; English.

It is the nucleotide sequence of the plasmid pBG396. The sequence was isolated from 2 libraries: a landa gt cDNA library derived from T cell tumour line REX and a landa gtl0 cDNA library derived from peripheral blood lymphocyes (PBL). For screening, a series of chemically synthesised antisense oligonucleotide DNA probes based on the known T4 protein sequence was used. The polypeptide encoded is useful in immunotherapeutic, prophylactic and diagnostic compsns. It can be used to purify HIV from a sample.

Sequence 5518 BP; 1334 A; 1424 C; 1403 G; 1357 T;
                                       DNA sequences coding for soluble T4-like polypeptide(s) - used in immuno:therapeutic and immunosuppressive compsns. and for preventing, treating or detecting AIDS Disclosure; ; 207pp; English.

It is the nucleotide sequence of region encoding the first 182 AA of t mature T4 sequence of plasmid pBG39. It does not contain the addition non-T4 6 amino acids at the C-terminus following AA 182. The sequence was isolated from 2 libraries: a lamda gt cDNA library derived from Teall tumour line REX and a lamda gt.0 cDNA library derived from peripheral blood lymphocytes (PBL). For screening, a series of chemica synthesised antisense oligonucleotide DNA probes based on the Known T4 protein sequence was used. The polypeptide encoded is useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-AUG-1990 (first entry)

  DNA sequences coding for soluble T4-like used in immuno:therapeutic and immunosupp preventing, treating or detecting AIDS Fig 19; 207pp; English.
It is the nucleotide sequence of the plas was isolated from 2 libraries: a lamda gt
                                                                                                                                                                                                                                                                                                                                                                                                         Tt is the nucleotide sequence of the plasmid pBG395. The sequence was isolated from 2 libraries: a lamda gt cDNA library derived from T cell tumour line REX and a lamda gtl0 cDNA library derived from peripheral blood lymphocyes (PBL). For screening, a series of chemically synthesised antisense oligonucleotide DNA probes based on the known T4 protein sequence was used. The polypeptide encoded is useful in immunotherapeutic, prophylactic and diagnostic compsns. It can be used to purify HTV from a sample.

For screening, a series of chemically synthesised antisense oligonucleotide DNA probes based on the known T4 protein sequence was used. The polypeptide encoded is useful in immunotherapeutic, prophylactic and diagnostic compsns. It can be used to purify HIV from a sample.

                                                                                                                                                                                                                                                                                                                                                                                    Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; pp; English.

CC The T4 CDNA of p170.2 is almost identical to that reported by P.J.

CC Maddon et al [Cell, 42, pp 93-104 (1985)]. The Maddon sequence was

CC revised in 1988 to correct a DNA sequencing error at the codon for AA 3

CC (corrected from Asp to Lys; see M12807 in GenBank). The DNA may be

CC truncated (to remove transmembrane and intracellular regions) and/or

CC modified by SDM, pref. so the prod. extends from AAs 3-183 of the

CC mature protein. This DNA can then be ligated to a toxin DNA esp.

CC anglogenin, or a fragment of Pseudomonas exotoxin A conty. the

CC anglogenin, or a fragment of Pseudomonas exotoxin A conty. the

CC inserted into an expression vector and used to produce recombinant fusion

CC inserted into an expression vector and used to produce recombinant fusion

CC protein which is useful for preventing or treating AIDS, ARC, and HIV

CC infections. The T4 protein is an HIV receptor which binds to the virus

CC or to infected cells carrying gp110/160 marker antigen, so provides v.

CC specific targetting with minimal damage to non-target cells.

                                                                                                                                                                                                                                                                                                                       given in N80622.

The partial sequence is compiled from lambda U2OS-39 and several other hBMP-2 class I cDNA recombinants.

This human cDNA hBMP-2 class I contains an opem reading frame of 1188 bp., encoding a protein of 396 amino acids. The protein is preceded by a 5 untranslated region of 342 bp with stop codons in all frames. The 13 bp region preceding this 5' untranslated region represents a linker used in the cDNA cloning procedures.

Disclosure; 7pp; English.

The HindIII-SacI bovine genomic bBMP-2 fragment described in N8062 is subcloned into M13, labelled and used as probe to screen polyadenylated RNAs from various cells and tissue sources. Sequence analysis of the strongly hybridising clones hBMP-2 class (-BMP-2) indicated that they have extensive homology with the sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      08-OCT-1990 (first entry)

prodn. of human tissue plasminogen activator - by myeloma cells, pref. in presence of epsilon amino caproic acid.

Disclosure; p; English.

The plasmid was prepd by cleaving the very long 3' UT of t-PA cE (which causes mRNA instability) 34 nucleotides downstream of st codon and inserting it into pEMpl vector. The pEMpl vector was constructed from the following components (see feature table):

(a) a 2.25 PvuII-BamHI fragment from pSV2-gpt contg. the SV40 enhancer and early region promoter, the E.coli gpt gene, the SV40

           The mammalian cell shuttle vector plasmid pSV7d contains the SV40 origin of replication and early promoter (315 bp, Pvull pos 272-StuI pos 5193 with an 8 bp deletion between nucleotides 173 and 182), a polylinker, and the SV40 poly A addition site (217 bp Bc11 pos 2775-pos 2558). The SV40 sequences were cloned into the pBR322 derivate pML between nucleotide 4210 and Nrul pos 973. The SV40 sequences are positioned such that the direction of transcription from the early promoter is in the same direction as the ampicillin gene of the vector. Three separate constructed by isolating EcoRi fragments from cDNA clones and ligating them into pSV7d previously digested with EcoRi and treated with alkaline phosphatase. The resulting clones were called pSV7d-pDGF-A103 (D1), and pSV7d-PDGF-BI (B-chain). Recombinant pDGF is
                                                                                                                                                                                                                                                                                                                                                                                                                                                            26-OCT-1988.
